#### **Definitions:**

Full Suppression/Perimeter Control: Implies a strategy to "put the fire out" as efficiently and effectively as possible, while providing for firefighter and public safety.

- (p) Point or Zone Protection/Limited Perimeter Control: Involves protecting specific points from the fire while not actively trying to line the entire fire edge.
- (c) Monitor/Confine: Management actions conforming to a monitoring strategy that periodically checks the fire to ensure it continues to meet objectives, and where no further action is taken.

For specific information on fire activity (new wildland and prescribed fires by agency/unit, year–to–date totals, and large incident specifics), please refer to the Southern Area or Detailed Situation Reports.

\*\* For the purposes of this report "Large ICS-209 Incidents" are defined as fires that exceeds 100 acres or larger in timber and slash (fuel models 8-13), 300 acres or larger in grass and brush (fuel models 1-7), or when a Type 1 or 2 Incident Management Team (IMT) is assigned. Incidents with structures destroyed are also included, regardless of size.

### Resources

The number of resources currently committed is obtained from Interagency Resource Ordering Capability (IROC). There may be slight discrepancies in the total number of resources reported. The Overhead column only reflects overhead positions, not the total number of personnel assigned.
