## **Aluminum Production Process**

Primary (smelter) mill test certificate (MTC)/certificate of analysis (COA): The left-hand diagram below shows the manufacturing process for <u>primary a luminum</u> in its first solid (casting) state. The countries where the aluminum is electrolytically smelted are the "countries of (second-)largest smelt." A mill test certificate should also display the first solid shape into which the aluminum was poured and cast.

Secondary (scrap melting/refining) mill test certificate (MTC)/certificate of analysis (COA): The right-hand diagram below shows the manufacturing process for secondary aluminum. The secondary mill test certificate, from scrap melting and a lloying, should NOT be used to determine the "country of largest smelt" and "country of second-largest smelt" for purposes of the aluminum import license.

## **Primary Metal**
