

News Release

EMBARGOED UNTIL RELEASE AT 10:00 a.m. EDT, Friday, June 30, 2023

BEA 23-29

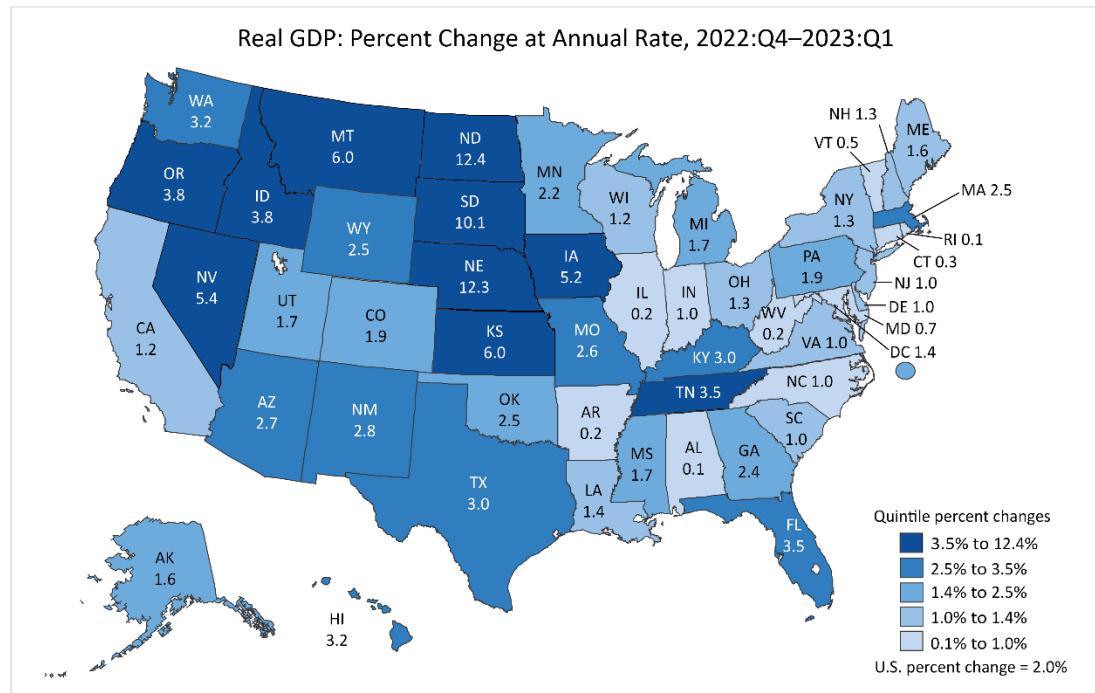

Technical:	Clifford Woodruff (GDP)	301-278-9234	GDPbyState@bea.gov
	Matthew von Kerczek (Income)	301-278-9250	REIS@bea.gov
Media:	Connie O'Connell	301-278-9003	Connie.OConnell@bea.gov

Gross Domestic Product by State and Personal Income by State, 1st Quarter 2023

Real gross domestic product (GDP) increased in all 50 states and the District of Columbia in the first quarter of 2023, with the percent change ranging from 12.4 percent in North Dakota to 0.1 percent in Rhode Island and Alabama (table 1), according to statistics released today by the U.S. Bureau of Economic Analysis (BEA).

Current-dollar GDP increased in 47 states and the District of Columbia in the first quarter, with the percent change ranging from 14.1 percent in Nebraska to -2.9 percent in West Virginia.

Personal income, in current dollars, increased in 48 states and the District of Columbia in the first quarter of 2023, with the percent change ranging from 11.4 percent in Maine to -1.0 percent in Indiana (table 3).

U.S. Bureau of Economic Analysis

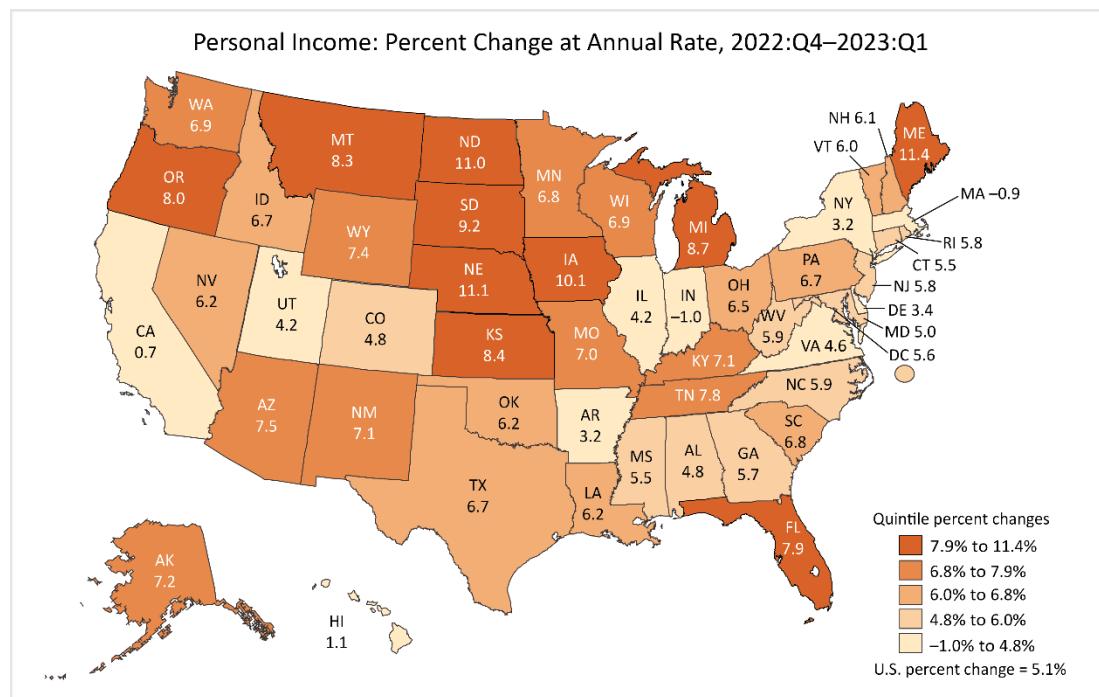

Real GDP

In the first quarter of 2023, as real GDP for the nation grew at an annual rate of 2.0 percent, real GDP increased in 14 of the 23 industry groups for which BEA prepares quarterly state estimates (table 2). Health care and social assistance; retail trade; and agriculture, forestry, fishing, and hunting were the leading contributors to the increase in real GDP nationally.

- Health care and social assistance increased in all 50 states and the District of Columbia and was the leading contributor to growth in 15 states.
- Retail trade increased in all 50 states and the District of Columbia and was the leading contributor to growth in 8 states.
- Agriculture, forestry, fishing, and hunting increased in 33 states and was the leading contributor to growth in 13 states including North Dakota, Nebraska, South Dakota, Kansas, and Montana, the 5 states with the largest increases in real GDP.
- Finance and insurance decreased in all 50 states and the District of Columbia. This industry was the leading offset to growth in Rhode Island, one of the states with the smallest increase in real GDP.

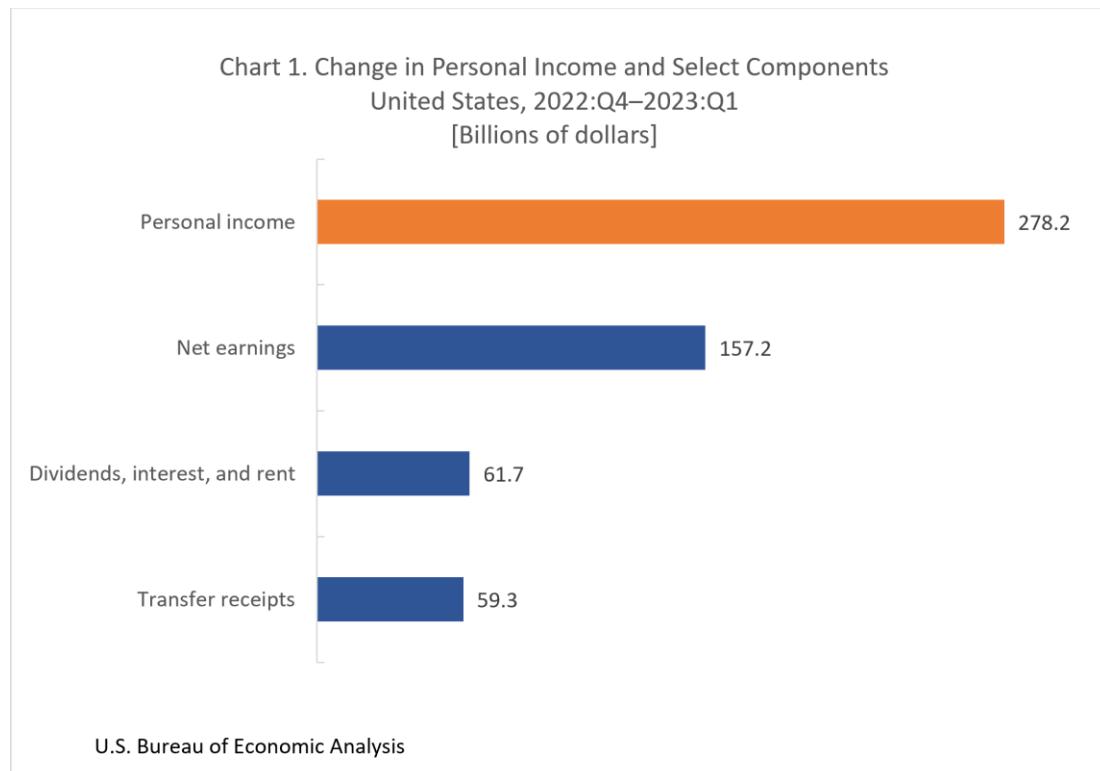

Personal income

In the first quarter of 2023, as current-dollar personal income for the nation grew at an annual rate of 5.1 percent, state personal income increased in 48 states and the District of Columbia (table 3).

U.S. Bureau of Economic Analysis

Nationally, earnings, property income (dividends, interest, and rent), and transfer receipts all contributed to the increase in personal income (chart 1).

Transfer receipts increased in 45 states and the District of Columbia, while growing 6.1 percent nationally. The growth in transfer receipts reflected an 8.7 percent increase in the cost-of-living adjustment for social security benefits. The percent change in transfer receipts ranged from 38.5 percent in Maine to –31.1 percent in Massachusetts (table 4).

Transfer receipts was the leading contributor to growth in personal income in Maine, the state with the largest increase in personal income in the first quarter. It was also the leading contributor to the decrease in personal income in Indiana and Massachusetts. Transfer receipts in all three states were impacted by one-time state refundable tax credits.

Property income increased in all 50 states and the District of Columbia, growing 6.0 percent nationally. The percent change ranged from 9.2 percent in Idaho to 3.4 percent in Kansas.

Earnings increased in all 50 states and the District of Columbia, growing 4.6 percent nationally. The percent change in earnings ranged from 12.4 percent in North Dakota to 0.1 percent in Arkansas (table 4).

Earnings increased in 19 of the 24 industries for which BEA prepares quarterly estimates (table 5). Professional, scientific, and technical services; state and local government; and health care and social assistance were the leading contributors to the overall increase in earnings. Increases in farm earnings was the leading contributor to growth in personal income in four of the five fastest-growing states including Nebraska, North Dakota, Iowa, and South Dakota.

Update of state statistics

Today, BEA also released revised quarterly estimates of personal income by state for the first through fourth quarters of 2022. This update incorporates new and revised source data that are more complete and more detailed than previously available and aligns the states with the national estimates from the National Income and Product Accounts released on June 29, 2023.

BEA also released new estimates of per capita personal income for the first quarter of 2023. BEA used U.S. Census Bureau (Census) population figures to calculate per capita personal income estimates for the first quarter of 2020 through the first quarter of 2023. For earlier estimates, BEA used intercensal population statistics that it developed based on Census methodology. See "[Note on Per Capita Personal Income and Population](#)."

Upcoming comprehensive update of the Regional Economic Accounts

BEA will release the results of the comprehensive (or benchmark) update of the Regional Economic Accounts on September 29, 2023. This update will present revised statistics for GDP by state and state personal income.

Next release: September 29, 2023, 10:00 a.m. EDT

Gross Domestic Product by State and Personal Income by State, 2nd Quarter 2023

- BEA Regional Facts ([BEARFACTS](#)) is a narrative summary of personal income, per capita personal income, components of income, and gross domestic product for counties, metropolitan statistical areas, and states.
- For complete information on the sources and methods used to estimate gross domestic product and personal income by state, see BEA's [gross domestic product by state](#) and [state personal income and employment](#) methodologies.

Definitions

Gross domestic product (GDP) by state is the market value of goods and services produced by the labor and property located in a state. GDP by state is the state counterpart of the nation's GDP, the Bureau's featured and most comprehensive measure of U.S. economic activity.

Current-dollar statistics are valued in the prices of the period when the transactions occurred—that is, at “market value.” They are also referred to as “nominal GDP” or “current-price GDP.”

Real values are inflation-adjusted statistics—that is, these exclude the effects of price changes.

Contributions to growth are an industry's contribution to the state's overall percent change in real GDP. The contributions are additive and can be summed to the state's overall percent change.

Personal income is the income received by, or on behalf of, all persons from all sources: from participation as laborers in production, from owning a home or business, from the ownership of financial assets, and from government and business in the form of transfers. It includes income from domestic sources as well as the rest of world. It does not include realized or unrealized capital gains or losses.

Personal income is measured before the deduction of personal income taxes and other personal taxes and is reported in current dollars (no adjustment is made for price changes).

State personal income differs slightly from the estimate of U.S. personal income in the National Income and Product Accounts because of differences in coverage, in the methodologies used to prepare the estimates, and in the timing of the availability of source data. In BEA's state statistics, estimates of personal income for the United States is the sum of the state estimates and the estimate for the District of Columbia.

Per capita personal income is calculated as the total personal income of the residents of a state divided by the population of the state. In computing per capita personal income, BEA uses mid-quarter population estimates based on unpublished U.S. Census Bureau data.

Earnings by place of work is the sum of wages and salaries, supplements to wages and salaries, and proprietors' income. BEA's industry estimates are presented on an earnings by place-of-work basis.

Net earnings by place of residence is earnings by place of work less contributions for government social insurance plus an adjustment to convert earnings by place of work to a place-of-residence basis. BEA presents net earnings on an all-industry level.

Property income is rental income of persons, personal dividend income, and personal interest income.

Personal current transfer receipts are benefits received by persons from federal, state, and local governments and from businesses for which no current services are performed. They include retirement and disability insurance benefits (mainly social security), medical benefits (mainly Medicare and Medicaid), income maintenance benefits, unemployment insurance compensation, veterans' benefits, and federal education and training assistance.

Personal income is measured before the deduction of personal income taxes and other personal taxes and is reported in current dollars (no adjustment is made for price changes).

Statistical conventions

Quarter-to-quarter percent changes are calculated from unrounded data and are annualized. Annualized growth rates show the rate of change that would have occurred had the pattern been repeated over four quarters (1 year).

Annualized rates of change can be calculated as follows: $((\text{level of later quarter} / \text{level of earlier quarter})^4 - 1) * 100$. Quarterly estimates are expressed at seasonally adjusted annual rates unless otherwise specified. Quarter-to-quarter dollar changes are differences between published estimates.

Seasonal adjustment and annual rates. Quarterly values are expressed at seasonally adjusted annual rates. For details, see the FAQ "[Why does BEA publish estimates at annual rates?](#)" on the BEA website.

Quantities and prices. Quantities, or "real" measures, are expressed as index numbers with a specified reference year equal to 100 (currently 2012). Quantity indexes are calculated using a Fisher chain-weighted formula that incorporates weights from two adjacent periods (quarters for quarterly data and annuals for annual data). "Real" dollar series are calculated by multiplying the quantity index by the current dollar value in the reference year and then dividing by 100. Percent changes calculated from chained-dollar levels and quantity indexes are conceptually the same; any differences are due to rounding.

Chained-dollar values are not additive, because the relative weights for a given period differ from those of the reference year.

Chained-dollar values of GDP by state are derived by applying national chain-type price indexes to the current dollar values of GDP by state for the 23 North American Industry Classification System-based industry sectors. The chain-type index formula that is used in the national accounts is then used to calculate the values of total real GDP by state and real GDP by state at more aggregated industry levels. Real GDP by state may reflect a substantial volume of output that is sold to other states and countries. To the extent that a state's output is produced and sold in national markets at relatively uniform prices (or sold locally at national prices), real GDP by state captures the differences across states that reflect the relative differences in the mix of goods and services that the states produce. However, real GDP by state does not capture geographic differences in the prices of goods and services that are produced and sold locally.

BEA regions

BEA groups all 50 states and the District of Columbia into 8 distinct regions for purposes of presentation and analysis as follows:

New England (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont)

Mideast (Delaware, District of Columbia, Maryland, New Jersey, New York, and Pennsylvania)

Great Lakes (Illinois, Indiana, Michigan, Ohio, and Wisconsin)

Plains (Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota)

Southeast (Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia)

Southwest (Arizona, New Mexico, Oklahoma, and Texas)

Rocky Mountain (Colorado, Idaho, Montana, Utah, and Wyoming)

Far West (Alaska, California, Hawaii, Nevada, Oregon, and Washington)

Uses of GDP and personal income by state statistics

GDP and personal income by state statistics provide a framework for analyzing current economic conditions in each state and can serve as a basis for decision-making. For example:

- Federal government agencies use the statistics in forecasting models to project energy and water use. The statistics are also used as a basis for allocating funds and determining matching grants to states.
- State governments use the statistics to project tax revenues and the need for public services.
- Academic regional economists use the statistics for applied research.
- Businesses, trade associations, and labor organizations use the statistics for market research.
